

Peer to Peer Strategy Trading with HABANA Token!

HABANA TOKEN

HABANA Token Whitepaper (version 1.0)

<https://www.habanatoken.com>

INTRODUCTION

In our view, there are fundamentally two different types of exchanges: the ones that deal with fiat currency; and the ones that deal purely in crypto. It is the latter one that we will focus on. Even though they are small now, we strongly believe that pure crypto exchanges will be bigger, many times bigger, than fiat based exchanges in the near future.

But cryptocurrency trading may not be appropriate for everyone. The risks of trading cryptocurrencies are mainly related to its volatility. They are high-risk and speculative, and it is important that you understand the risks before you start trading. Market volatility can cause prices to move from one level to another without actually passing through the level in between. Gapping (or slippage) usually occurs during periods of high market volatility. As a result, your stop-loss could be executed at a worse level than you had requested. This can worsen losses if the market moves against you.

HABANA is the first crypto-trading platform whereby you can trade like the pros, copying their strategy to generate market-beating returns.

ABOUT \$HBA - How it works?

\$HBA is the main currency needed for all HABANA platform services. For example, to register as a trader in the HABANA platform, or to be able to copy other traders you need to pay the fee which is charged in \$HBA.

HABANA is on the BSC network, which is much quicker and more cost-efficient for users compared to the high gas Ethereum network.

Peer to Peer Strategy Trading

HABANA is the first crypto-trading platform enabling peer to peer strategy sharing. All market participants demonstrate their performance and you can select and copy the best strategies!

Easy Investment

You can easily choose the best traders based on their performance, create one or multiple portfolios (just by a few clicks) to delegate your investment with peace of mind.

Low Transaction Fee

Saving extra costs means taking more profits. HABANA is on the BSC network, which is much quicker and more cost-efficient for users compared to the high gas Ethereum network.

100% Safe and Secure

HABANA is distributed on the De-Fi Binance Smart Chain (total value on chain exceeds \$30B).

All assets and transactions are secure, verifiable and viewable on the block-chain.

Create Your HABANA Bot

If you are a trader, you can create your own HABANA Bot and earn money by selling or renting them to the investors and make a good passive income for yourself.

HABANA has a Marketplace for HABANA Bots, so everyone can browse and select through the available Bots.

If you are an investor, you can make a portfolio mixed of both bots and the traders.

Diamond Hands are Easy!

Crypto markets are notoriously volatile and operate 24/7 meaning reliably generating returns isn't simple or easy or stress-free, until now.

Thanks to our sophisticated platform, you can delegate the trading to full-time professional traders of your choice, based on your risk profile, your time preference and the total amount to invest.

ROADMAP

Road Map

Here are the key steps of the project

TOKENOMICS

Name : **HABANA Token**

Symbol : **\$HBA**

Total Supply : **1,000,000,000**

Contract Address:

0x53854791047139f1c8BCDd5C7028c3B6510d031

Note: In order to see your \$HBA tokens in your wallet, please add this address to your wallet app.
